

FANCIES OF FASHION

MUST HAVE PANELS

NECESSARY ELABORATION OF THE "FROCK."

Desire of Fashion That is Expensive and Troublesome But Really Gives Them a Charming Effect.

HAVE YOU EVER noticed that it is a "frock" in summer and a "dress" in winter? The feminine mind, the fashionista, is so subtle as to appear to say, for "frock" suggests simplicity, kindness and youth, while "dress" hints at dignity, richness and more or less elaboration.

Certainly the summer frock of 1920

is airy and youthful, but, alas, no simple and no feature contributes more to its elaboration than a panel. A panel can never be simple, and a generally involves trimming within its borders and as an outline.

In the up-to-date frock from the mod, it is absolutely essential. Quite generally it runs from the edge of the deep yoke in the back of the front, down, and then on the sides and back smaller panels are introduced. Even sleeves are paneled in much.

On some of the best frocks, like

GOOD HOT WEATHER COLLAR.

New Design is a Rival to the Low Puritan Style.

SHOW THE HOT weather hours there has come out a very pretty rival to the low Puritan collar. It is either a collar to the shirtwaist or, better still, buttoned to it.

It is cut on the fashion of the regular stiff linen shirtwaist collar, except that the point that rises over is wider and has slightly pointed ends.

The foundation is as high as one wants it and to the best of this is the innermost part of plain organdy or dotted organdy. The edges are finished with narrow ruffles or calicoes or shiny lace.

Even the foundation is quite short, double in thickness, and carries over the starch. It is fastened in the neck band, when described, back and front and under the whole with a thin band of colored satin ribbon, ending in a flat bow in front.

Not Always Blooming.

The fashion of trimming the lace on the right rather than on the left side is gaining favor, though it has not been said that the arrangement is particularly blooming. Modelling flowers or tips are graceful, but the hours back of ribbon, with short, closely packed loops, is decidedly the opposite to effect. There is a loveliness about it suggestive of anything but good taste, and not infrequently the wearer is positively sneering looking in consequence, for this style is only suited to very few faces. Most women need the aid of clothes that will not detract from a good appearance.

The Black Cat Parasol.

The fashion for carried and jeweled umbrellas has not quite died out. The novelty of the sideshadow is a bright green silk parasol with a stick of black wood at the end of which is carved a jet black kitten. It has green eyes.

TALL WOMEN IN FASHION.

Season's Costume Little Adapted for the Stout Sister.

The thin woman has never been given half a chance. For the past 25 years she has tried all the remedies offered in become stout, and tonight all manner of things to trick the slender into believing she had a beautiful figure. Conditions are different. The stout woman is trying all the useful remedies on the market to become like her thin sister. The thin sister is the thing. The new gowns have brought this about and the new corsets. But it is a struggle. And the thin girl just laughs. She is losing her feelings.

The woman with a good figure cannot but rejoice at the hip rube, which has appeared in Paris and which is being rapidly adopted elsewhere. The hip rube is very deep and it fits the figure like a glove. It is fastened invisibly at the back. The skirt, which is a circular skirt, is fastened to it in such a manner that it shows the slightest flare. Around the feet the skirt

ROBINS NEST ON ENGINE.

Birds Select Queen Home, But Have Much to It.

THE L. & W. engine No. 311, which runs from New York to Albany, N. Y., and which takes its regular trip to the north, was the first to be in a small nesthouse in the station during the day. The nesthouse, which was built by the L. & W. engine, was built by the L. & W. engine, and was built by the L. & W. engine.

They appeared there in July, and about a month after meeting some birds, and were seen to be in the nesthouse. The nesthouse was built by the L. & W. engine, and was built by the L. & W. engine.

The nesthouse was built by the L. & W. engine, and was built by the L. & W. engine. The nesthouse was built by the L. & W. engine, and was built by the L. & W. engine.

WORK OF THE RAILROADS.

They Keep the South and North Together After the War.

The Southern railroad, which then had a route from the north and south, was built by the L. & W. engine, and was built by the L. & W. engine.

The Southern railroad, which then had a route from the north and south, was built by the L. & W. engine, and was built by the L. & W. engine.

How Knives for Hat Pins.

Two Knives made out of jet, brilliant or colored glass also are now used for hatpins.

They are quite a change from all the other designs we have had. Jet, used often in hats of white silk trimmed with black silk and are quite effective. They are also used on hats of pastel pink.

NEW NIGHT-DRESS SACKET.

To Be Suspended by Ribbons from the Head of the Bed.

A very novel idea for a night-dress sacket is shown in our illustration, which gives a suggestion for a shape which will make a change from the more ordinary one, which folds over and fastens with a flap.

The sacket described is made in the form of a deep skirt and it is in the form of a deep skirt and it is in the form of a deep skirt.

Indeed that it should be suspended by wide satin ribbons from the head of the bed, so that it may serve a more decorative purpose than has hitherto been the case. The sacket itself is of white silk, unadorned with a wide and delicate design, worked in very delicate shades of pink and green, with a border of silk cord and green, with a border of silk cord and green, with a border of silk cord and green.

Many other pretty floral designs might be used in place of wild roses, and on grounds of various colors. Sprays of appleblossom would be effective, for instance, on a pale blue ground, or clusters of dark roses on white or green. They should, of course, be chosen to suit the disposition, etc. in the room.

Read the Black System.

After several sessions of the Black System, the Chicago man, who was the first to introduce the Black System, was the first to introduce the Black System.

Gray is Warm.

Gray is warm, though not a heated color. The pale shades, such as pearl and silver, are the favored ones, and, as a rule, green of this delicate color shows a relief by way of a contrasting trimming.

STRANGE SLEEPING SICKNESS

NEW BRITISH COMMISSION APPOINTED TO STUDY SOUTH AFRICAN DISEASE.

THE STRANGE SLEEPING SICKNESS.

A DEAD CITY IN PERSIA

A retired French officer, M. H. de Souillans de Lacoste, has discovered in Persia, in eastern Persia, a buried town. It lies almost midway between Meshad and the Persian Gulf, in a district that Great Britain and Russia may long some day take possession. It lies in a desolate region, but shows evidence of a high civilization.
